**University of California at Santa Cruz Santa Cruz, CA**  
 Earth Sciences, Bachelor of Science, 1978 - 1981 GPA: 3.0

### **Paul Lato Wines**

**[paullatowines.com](http://paullatowines.com)**

This is a Flash to Wordpress conversion project. We wanted the information to be in a database and the eases and slideshows to be set up with jQuery. We built the original Flash site earlier and it is displayed at [code-rage.us/winery](http://code-rage.us/winery). There were some redesigns implemented by the designer, Lois Harrington. We used a template and various plugins to get us close and then edited the PHP to get it to display more precisely.

### **San Diego Hand SIG**

**[handsig.com](http://handsig.com)**

Developed Wordpress site that helped a group of Occupational Therapists clean up an outdated email list and increase enrollment by 40%.

### **Star Marine Service**

**[starmarineservice.com](http://starmarineservice.com)**

This site is HTML/CSS based with some SEO issues that needed to be addressed. Lois Harrington designed the site. She started the HTML build and then passed it to me to fix some errors, build a contact form and add some image preloaders. Keyword analysis of the business was done to help his search listing. Resulted in first page Google listing for his main keywords.

### **Stine Poole Furniture**

**[stinepoole.com](http://stinepoole.com)**

This site is HTML5/CSS3 and jQuery based. Lois Harrington designed the site and began the original HTML. I was brought in to convert the site to HTML5, add embedded sound files and slideshows. The embedded sound files use Javascript to manipulate DOM elements during and after playback. I used the jQuery Cycle plugin to build the slideshows.

### **Richard Loos Associates**

**[richardloosassoc.com/strategic\\_consulting.html](http://richardloosassoc.com/strategic_consulting.html)**

This site is HTML/CSS based. It uses a dropdown menu system, custom scrolling and a contact form with some extensive validation requirements. Designed by Lois Harrington, [loisharrington.com](http://loisharrington.com), I coded the site to completion. I used spry to build the dropdown menu, Flexcroll for the custom scrollbar and secure PHP Form Mailer developed by Dagon Design. This site has been abandoned with a redirect on the homepage but have kept the rest of the site intact and available for viewing.

### **West Coast Wine Network**

**[westcoastwine.net](http://westcoastwine.net)**

Started from scratch in 1995, built traffic to over 6,000 people per day. Initiated advertising campaign that reached \$30,000 in yearly sales. Managed Unix/Linux server, Community management. This site is what led me into web development. It had always been an HTML based site with forum software installed. I've used a number of forum modules over the years but finally settled on a module called UBB. Threads because it's a commercial product that is not widely used and doesn't get hacked as often. In 2011, I ported the site over to Joomla. After a year and a half I decided I was concerned about upgrade problems I was having with both the plugins and the core Joomla code and decided to switch over to WordPress.
